

AI that acts. Humans who decide.

Sell MDR outcomes, not another tool. ContraForce Hosted is live.

ContraForce is an Agentic Security Delivery Platform. Security Delivery Agents triage, investigate, respond to, and resolve alerts and incidents for your MSPs, averaging about 60 seconds per resolution. No SOC to build. No Microsoft Sentinel required.

Starter Plan \$249 /mo The easy first yes for any MSP.	Included 300 runs Alerts and incidents resolved monthly.	Typically covers ~25 customers SMB end customers under one MSP.	Time to value Minutes Deploy and connect every tenant fast.
--	--	---	---

A run = one alert or incident worked end to end: triage, investigation, response, resolution. Runs pool monthly across the MSP's whole book. As a book outgrows Starter, step up to Growth, so capacity is planned, not a surprise charge.

Why MSPs buy it

- ✓ **Scale delivery without hiring.** Agents work every alert around the clock, so the team covers more tenants with the same headcount.
- ✓ **Protect margin.** Bring MDR in-house instead of paying a per-seat MDR vendor on top of the Microsoft stack.
- ✓ **Consistent quality across tenants.** Gamebooks enforce the same SOP on every customer. No drift, no key-person risk.
- ✓ **Humans stay in control.** The agent acts on triage and response. The MSP decides what matters. Every action is logged.

How to open the conversation

- "How many of your customers run Microsoft Defender or a third-party EDR?"
- "Who works the alerts nights and weekends?" Most cannot answer cleanly. That is the gap.
- "What are you paying your MDR vendor per seat?" Show the margin they keep by bringing it in-house.
- "Want to see it resolve a real alert in one tenant?" Time to value is the demo.

The deal that grows

\$249/mo → **\$1,499**/mo → **\$3,999**/mo
Starter Growth Scale

Starter is the easy first yes, not the ceiling. As the MSP adds tenants and resolves more runs, the account steps up to Growth and Scale. You build a compounding monthly book, and the margin the MSP keeps is what makes them expand.

Proven in production

Built on the Microsoft security stack and running in production today with MSPs delivering managed MXDR across their customer base.
